

106. 109 was found in sealed below rubbers dump of recent time AND in a place PAVE. II was missing but it was probably originally COVERED BY THIS PAV. It was found centimeters FROM THE FOUNDATION COURSES OF THE SYNAGOGUE S. WALL.

When was it deposited? (1) in THE DATE OF <sup>CONSTR.</sup> construction? (2) in connec with street II PAV. after a destruction while reconstruction. (3) in connec with II which is only according to Netzer? (4) Later with no connec. with probably known stratigraphy?

~~It's~~ its latest coin dates to 408-423 rather close to the end of 4th cc

fixed before as Ter. p. q. date for erection and this might give a better more accurately p. q. date <sup>for the erection</sup> How much can we trust the 1311 survey coins to give us a date ~~and~~ for the deposit periods? Where exactly did they come from?

"Confused? All that and many others will be answered in our next program: Dig Below"

Seriously THE evidence of Hoard 109 can be only a collaboration TO THE RESULTS of our next season of exc.

### Hoard 133 (+105, 106)

#### Inside Hall stratigraphy.

CRIM THE Top downward

- Ia CHANGES in THE Hall including (1) a new base for THE <sup>TORAH SHRINE</sup> ~~SHRINE~~
- (2) an Ionic capital put upside down between two columns in THE western row. for additional support of ARCHITRAVES!
  - (3) Blocking THE outside entrance to the room abutting the syn. on THE east, laying a new plaster covering for walls and floor
- I THE erection of THE ASHLAR WALLS, Benches, columns, first Torah-shrine, Hard plaster floor

- II 3 walls or part-most of walls, unearthen in our last ~~so~~ season in APRIL 1915 (unpublished)
- in THE western Half of THE SYN. (in THE northern Half in all THE pits no strata were found between hard II floor and rock bottom)
- These are THEREFORE presynagogue walls of a smaller building as yet unidentified (for wooden presyn. walls see exc. of Hammat Tiberias)
